AUMERIAL

NTi

The future of the IBM i is written in .NET

IBM Silver Partner

Tools for every need

Enjoy the full benefits of .NET with NTi and its extensions:

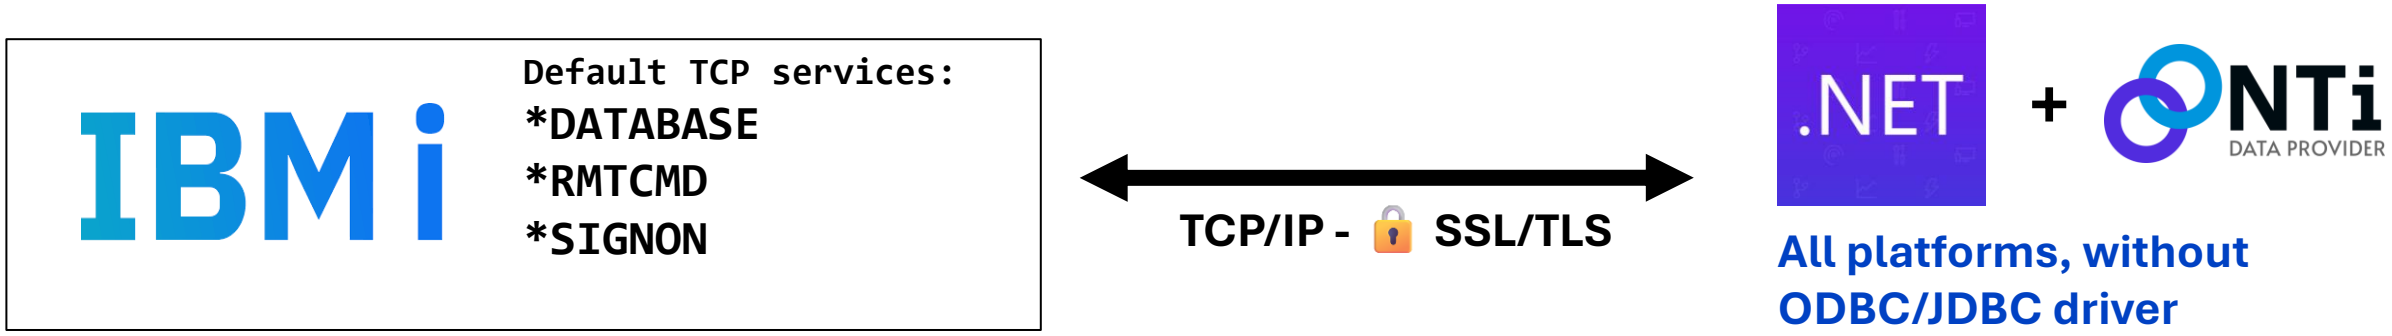
EF Core 8 for NTi
The reference ORM for your IBM i

NTi Data Provider
The native, lightweight, standardized .NET connector

NTi Toolbox
IBM i-specific features

NTi Data Provider

NTi Data Provider connector provides native, driverless access to IBM i



Ăđ ėđ℗ỳ źĂ

- No client-side driver, no IBM i installation required
- Platform and version agnostic
- DB2 for i access, program calls, CL, APIs
- TCP/IP connection with SSL/TLS support
- Efficient job management QZDASOINIT/QZRCSRVS
- No dependence on third-party solutions
- Standardized ADO.NET

NTi Data Provider

Applications using NTi are truly cross-platform and cloud-native

A single development

.NET + NTi DATA PROVIDER

Multi-plateform

docker, OPENSHIFT, Android, mac OS, Raspberry Pi, Windows, Linux

Multi-architectures

intel. XEON, ARM, IBM Power

aws, Azure, Google Cloud

CSPs/MSPs

EF Core for NTi

EF Core offers total abstraction from the DB2 for i database, so you can develop new applications at lightning speed, whether you're starting **from scratch** or **from an existing database.**

Code First

Develop applications without worrying about the database: tables, columns and CRUDs are automatically generated without a single line of SQL.

DB First

From an existing database, automatically generate your application's data access layer and interface elements.

EF Core for NTi

Generate .NET entity models automatically from an existing database, and vice versa

DB2 for i

```
USERS
   - ID INTEGER GENERATED ALWAYS AS IDENTITY
   - NAME VARCHAR(256) NOT NULL
```

DB First ↓ ↑ Code First

.NET source code

```
Public class Users {
    [Key] public int Id {get; set;}
    public string Name {get; set;}
}
```

EF Core for NTi

Handle DB2 for i with C#, EF Core takes care of the data access layer:

- SQL generation
- Parametric queries
- Entity mapping

.NET source code

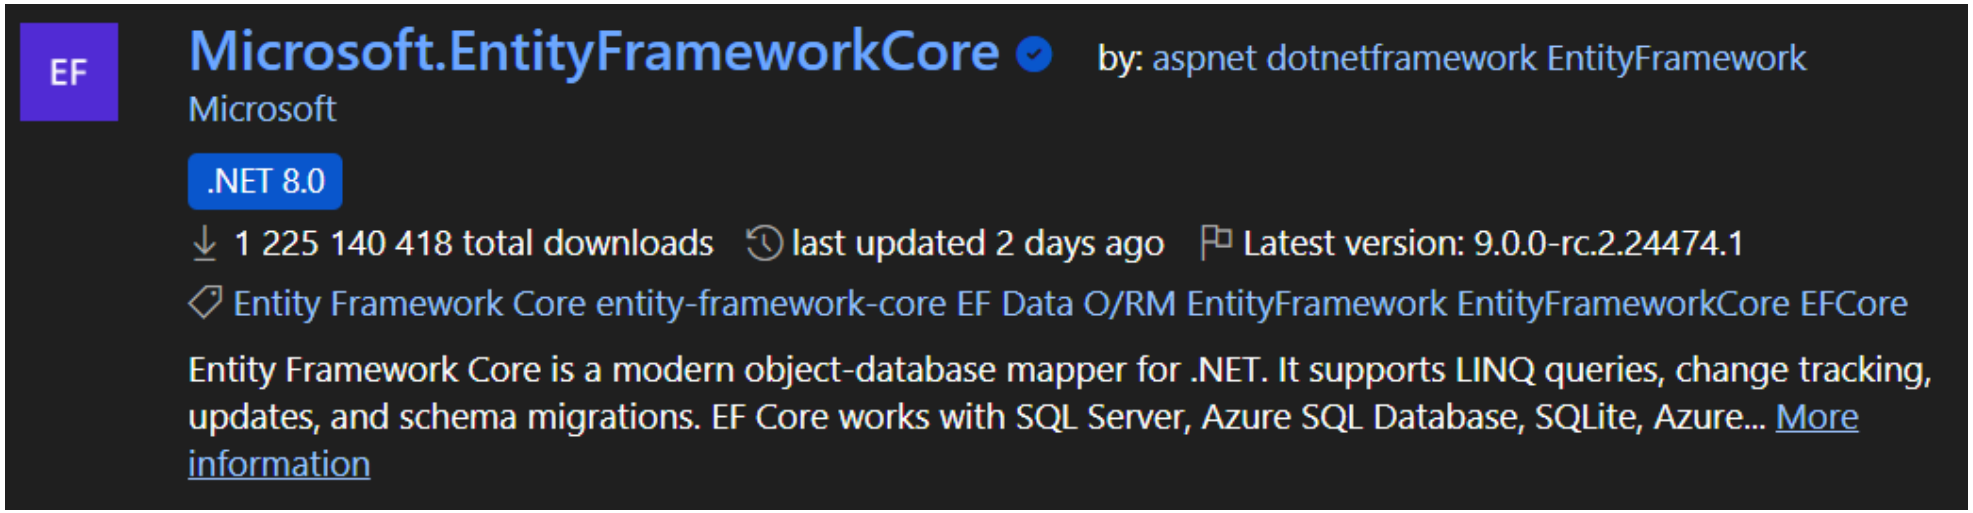
```C#
List<User> users = context.Users.Where(x ⇒ x.Name == "Smith");
```

Automatically generated SQL query

```SQL
SELECT * FROM USERS WHERE NAME == 'Smith'
```

EF Core for NTi

Entity Framework Core is standardized and **not specific to NTi**. It is used in the same way with Postgres, SQL server and Oracle. All .NET developers have mastered these techniques.



Toolbox NTi

IBM i-specific methods for administering your system and interacting with its specific resources.

In a single line of code, list spool files, execute a service program procedure and much more, thanks to the NTi Toolbox methods.

Example: list spools files

```C#
var spools = connection.ListSpooledFiles();
```

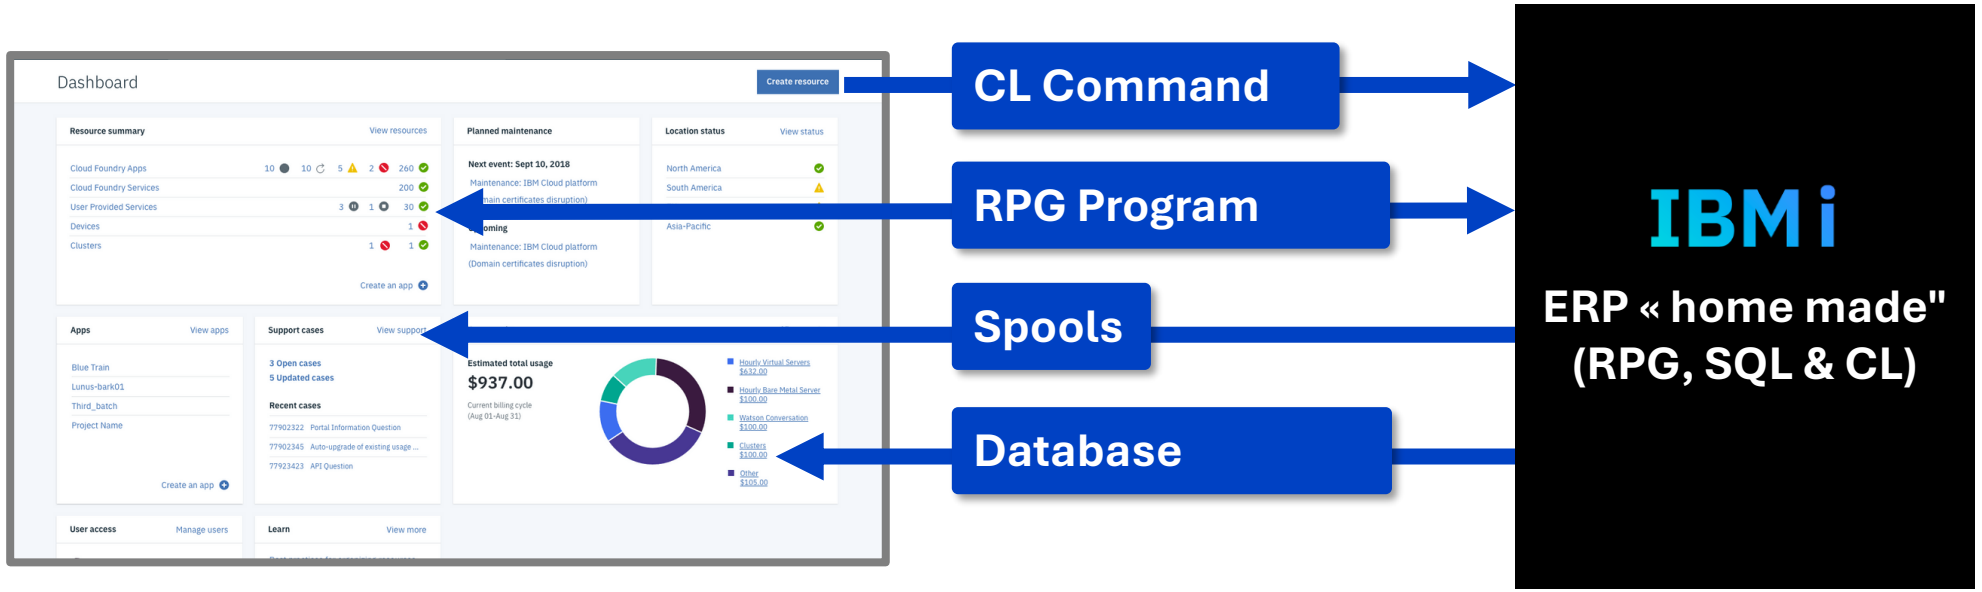
Evolve without risk

Project yourself into every stage of the evolution of your IBM i platform:

- Short-term
  Graphic interfaces
  Reuse of existing business applications
- Middle/Long term
  Consolidation on IBM Power
  Development of new applications

Use case: Modernization

Reuse existing IBM i applications (RPG, SQLRPG) and build modern interfaces with new, scalable functions



Example:

Case study : i.Gayte.it

AD-iCT application GUI reuses all existing applications

```
 gayte.it                Tous les identifiants                    10/11/22

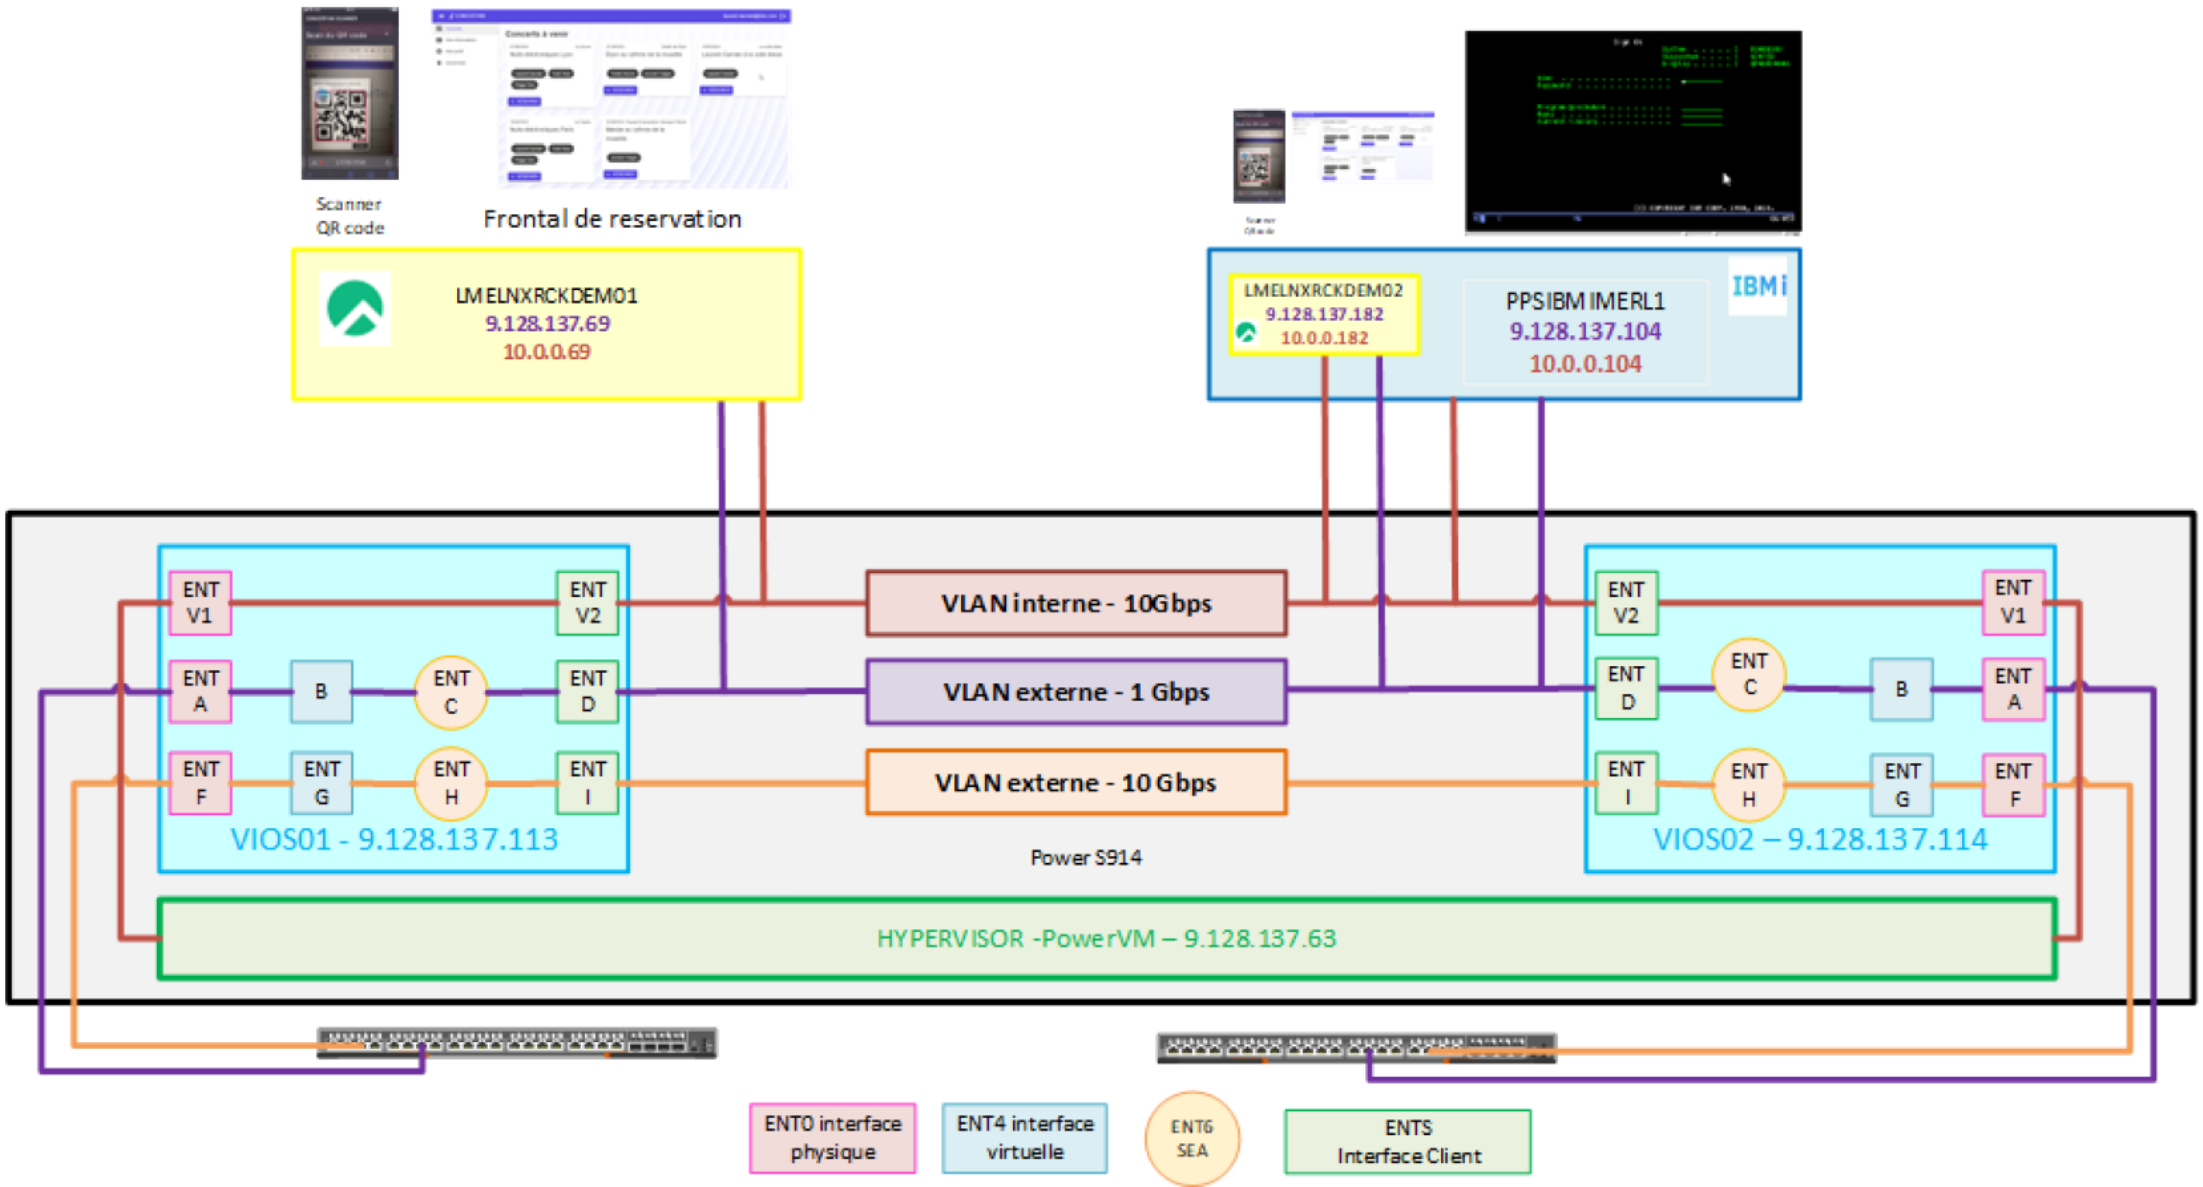
Use case: .NET on Power

Deploy your .NET/IBM i applications directly on Power thanks to native .NET runtime support, and consolidate your infrastructure on a resilient, cost-effective platform.

Example:
POC AUMERIAL/IBM
Concert ticket booking website + mobile app containerized on a Linux LPAR (Power 9)

Infrastructure NTI/IBM i -concert400 + Scanner QR code
.Net / RockyLinux / IBM i / PowerVM / Power9



A single license

A single annual subscription for unlimited use

3,000 excl. tax/year per IBM i partition

✓Unlimited users

✓No notion of software group

✓Nti DataProvider, EF Core, Toolbox
