

Full IBM i access, powering innovation and your projects

NTi is the 100% .NET component that connects your applications to the full IBM i resources.

72 % of IBM i organizations cite modernization as a major concern, versus 51% in 2021.
(Fortra IBM i Marketplace Survey 2026)

The modern software lifecycle requires agility and freedom. But when your core business runs on IBM i, every new feature and every client deployment can become more complex than expected.

Staying competitive starts with the right technical choices. Give your products the best IBM i access on the market.

With NTi, access the full IBM i from .NET. No duplication of IBM i resources, no driver to maintain, no prerequisites at your clients' end. Your applications gain in quality, modernity, and longevity.

- ✓ DB2 for i
- ✓ RPG programs
- ✓ Multiplatform
- ✓ EF Core 8/9/10
- ✓ CL commands
- ✓ IBM i authentication

More use cases

Web, mobile, containers, cloud: deliver your solutions anywhere, with no architecture or deployment constraints.

More agility

EF Core, CI/CD, modern pipelines: iterate and ship faster, with the tools your teams already use.

More value

The full IBM i stack in your solutions. Every resource becomes a feature to expose.

More control

A single component, no third-party dependency. Redistribution-ready licensing and responsive publisher support.

FULL IBM i ACCESS

- ✓ **DB2 for i** : SQL, transactions, stored procedures, cursors, LOB, all data types
- ✓ **Programme RPG / CLP / COBOL** : calls with input/output parameters, DataStructures
- ✓ **Commandes CL** : IBM i command execution without going through SQL
- ✓ **EF Core 8/9/10** : DB2 for i like any other database. LINQ, Code First, DB First, migrations
- ✓ **Toolbox** : Spools, system values, user info and service programs via .NET methods
- ✓ **Multiplateforme** : Deploy your applications wherever your architecture requires.

HOW IT WORKS

A single NuGet package to reference in .NET, nothing to install on the IBM i. NTi is 100% ADO.NET and connects through your partition's native TCP/IP services.

QZDASOINIT	DB2 for i
QZRCSRVS	RPG / CL
QZSOSIGN	Authentication

SECURITY

-  **IBM i authentication**
User profiles and rights natively enforced.
-  **Encrypted transfers**
SSL/TLS on all connections, dedicated ports available.
-  **MFA supported**
Integrated TOTP multi-factor authentication (IBM i V7R6+).
-  **Audit & traceability**
Every connection maps to an identifiable IBM i job.

COMPATIBILITY

• .NET FRAMEWORK 4.7+

• .NET STANDARD 2.1

• IBM i V5R4+

• .NET 6 to 10

• .NET CORE 3.1

• Mono & Xamarin

Windows

Linux

macOS

Docker

AWS

Azure

IBM Power

ARM64

iOS

Android

GET STARTED IN 3 STEPS

01

Activate your license

Sign up at portal.aumerial.com and retrieve your license key.

02

Add NTi

Add [Aumerial.Data.Nti](#) to your .NET project via the NuGet package manager.

03

Start building

Establish your first IBM i connection and [start immediately](#).
